NVG Cockpit Modification Checklist

Below is a checklist of images that will be required in order to develop an accurate estimate for completing an NVG cockpit modification. Clear, high resolution images are best so that we are able to make precise fits and read component details, make and model of radios, instruments, gauges, etc. Additionally we need model of aircraft such as 206 (L series or B series), and a list of current NVG compatible OEM equipment, if any. These images/info will be needed for each aircraft needing a quote.

❖ External Images

- Tail Position Light
- Left Position Light
- Right Position Light
- Strobe Light(s)
- Wire Strike Upper/Lower
- Searchlight(s)
- Camera(s) (if applicable)
