

Comprehensive Night Vision Solutions™

Night Flight Concepts, Inc. sees dramatic increase in demand

Sunday, February 22, 2009

Night Flight Concepts (NFC) reports a significant increase in business for both equipment and training in the wake of increasing regulatory scrutiny of the helicopter industry, specifically, the helicopter air medical sector.

The company has been providing helicopter night vision ground and flight training utilizing the most advanced technology and techniques for several years and specializes in all aspects of night flight safety. As an FAA approved FAR Part 145 night vision goggle (NVG) inspection, service and repair facility, Night Flight Concepts also provides its customers with comprehensive equipment and services.

Night Flight Concepts, Inc. owner and president, Adam Aldous, commented, “We've seen a marked increase in requests from flight operations looking to improve their safety profile with the addition of night vision capable aircraft and aircrews. Our current customers also continue to add NVG capable aircraft and flight training to their fleet operations. We can develop very comprehensive and customer specific packages to suit any mission requirement for improved safety during night flight operations.”

The company has an extensive list of international customers operating helicopters with missions such as air medical transport, law enforcement, government and military operations, flight training and offshore operations. Night Flight Concepts employs a staff of flight instructors with an extensive background in night vision goggle flight operations around the world. Other capabilities include NVG related consulting, aircraft cockpit and crew station NVG modification and installation along with the latest generation TSO NIVISYS goggles sales and service. Additional capabilities for training maintenance technicians to properly service and maintain NVG equipment will be introduced in 2009.

About Night Flight Concepts

Based in Port St. Lucie Florida, Night Flight Concepts provides complete night vision goggle equipment, flight training and support for global customers looking to improve night flight safety for rotary wing flight operations. The company can also provide aircraft cockpit, cabin and crew station night vision capable modifications, installation and related consulting.
